

Identify and detail work for completion while in the field with...

...TotalMobile JobBuilder

JobBuilder is a work creation application that allows remote workers to document additional job-related tasks for completion, detail their scope and specify the tools and equipment required.

Features

- Allow workers/inspectors/engineers to identify and report future job requirements while at the scene
- Create detailed job information i.e. list equipment, schedule times, locations, specify measurements and much more
- Create templates for documenting work faster
- Works as an independent application or in conjunction with other TotalMobile applications for enhanced functionality i.e. plan and organise work-surveys with Job Management and Visits

Benefits

- Provide a faster service by reporting and assigning jobs quicker
- Save paper and administration time by submitting jobs directly into corporate systems
- Prepare workers with all the information they need to complete jobs in one visit, saving money and time

TotalMobile JobBuilder runs on Windows Mobile devices and integrates seamlessly with back office systems and databases - complementing your existing IT infrastructure.
